Narayani Nifty Trading Strategy

- Daily Nifty Swing (High – Low) is minimum 50+ points on any given day
- As per our trading strategy, we target only 25 - 30 points a day (for safe players), on average basis (Some days we may get 50+ points and some day we may see stop loss hit)
- Required Capital : Approx 125,000.00
- Suggested Lot Size : 250 Nifty (5 lots)
- Expected return (Projection)

Our Suggest lot size is 250 Nifty (5 lots) x 25 Points Net x 20 Days = Rs. 125,000.00 Per month is expected return per account
- Market is in bull phase or bear phase is not our concern, our concern is Daily Swing which will remain in both bull and bear phase
- You will be surprised to know that some analyst have already started using our above strategy under there name with unrealistic targets of 80 points daily to attract clients.
- We have projected achievable target, suppose if a day swing is 80 point is it possible to catch exact day high and day low ??? Obviously no.
- We don't promise big profits, we will try to collect drops of 25 – 30 points daily (average basis)
- We believe drops together can create ocean.

Day Trading in Stock Markets is a highly profitable Business if you have definite plans and pre-determined strategies. As a Day trader you can earn profits regularly on every day in both rising and falling markets. This is possible because Nifty and almost all actively traded stocks registers four price levels every day i.e., the opening price, intra day high price, intra day low price and the closing price. The difference within these price levels in any market whether rising or falling will be around 2 % to 12 % giving lot of opportunity for day traders to earn profits daily by entering into both long trades and short trades.
